

VAC-PACK APPLICATIONS

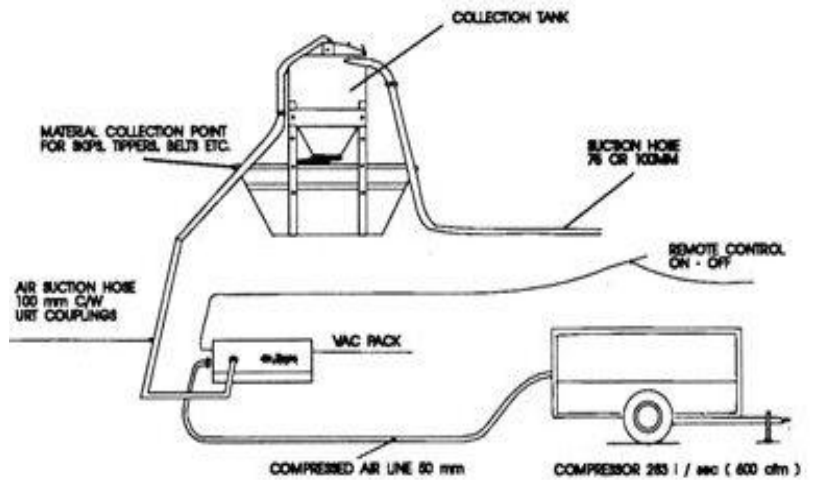

DRUM LOADING SYSTEM

Where materials need to be recovered and collected in open top drums for disposal this system is powerful, environmentally & intrinsically safe. With low cost, maximum flexibility and optional dust filtration, this system can be utilised for the recovery of Wet or Dry materials

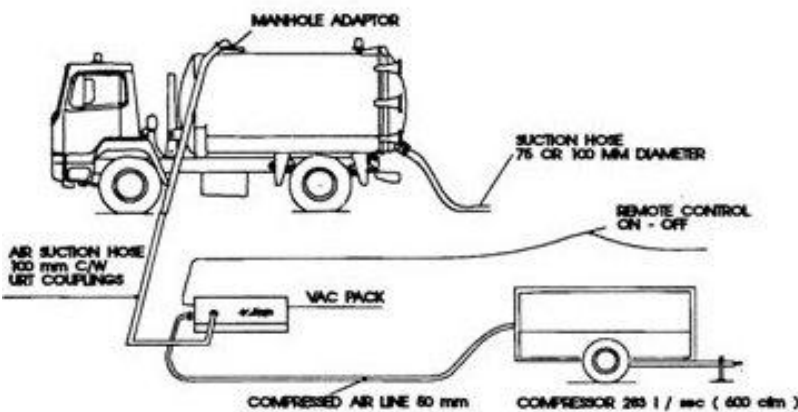

GRAVITY DISCHARGE COLLECTION TANK SYSTEM

Where materials need to be recovered and discharged into skips or onto conveyor belts or transferred from tank to tank. The Vac-Pack collection tank unit is simple and flexible. Available with automatic or manual fill / discharge controls and adjustable support legs for quick trouble free installation.

VACUUM TANKER UPRATING.

The Vac-Pack tanker adaption system will convert a standard vacuum tanker into a powerful, pneumatic vacuum conveying unit, capable of recovering a wide range of materials, at high production rates, normally considered impossible to handle with standard vacuum tankers.
