

SET AND FORGET STONEDUSTER

✓ High Density Trickle Duster with Automatic Shutdown

The Set & Forget Stoneduster is a standard Brain “Maxi-duster” that has all the same design and operating benefits but with the addition of a hopper extension, lid and a simple but ultra reliable factory set timer mechanism.

The hopper is pre-filled with approximately 15 bags of stonedust and the 2” delivery hose positioned as required. It can be placed on the floor or passed through a stopping without securing as the hose is not pressurised.

When the unit is activated it will steadily discharge the hopper contents over a 10-25 minute period before automatically shutting down. This steady metering of stonedust at high density into the ventilation air stream has been proven to achieve excellent coverage over long distances.

A 50NB brass male camlock is fitted for connection of the FRAS stonedust delivery hose which can be supplied with the unit if required.
